Satellite operators stress importance of C-band for vital satellite services in Africa

Abuja, Paris, 28 January 2015 – Speaking on behalf of the international satellite¹ community, Michel de Rosen, CEO of Eutelsat, today warned African states of the consequences for the continent if C-band resources are reallocated to mobile operators.

Michel de Rosen was speaking to delegates from African countries gathered in Nigeria for a meeting organised by the African Telecommunication Union (ATU) to prepare for the World Radiocommunication Conference scheduled to take place in Geneva from 2 to 27 November 2015. During the meeting in Abuja, African states will define their position on access to the C-band that is currently allocated to satellite operators and claimed by mobile operators.

Michel de Rosen reminded delegates that the C-band is widely used to provide vital services, including air traffic control, government and enterprise communications, disaster relief, broadcasting and Internet access. The use of C-band by mobile operators would mean the total loss of these critical services, with no possible alternatives.

“Opening the C-band to mobile operators would not herald the expansion of its use for new services. It would mean the end of services, with no guarantee that new mobile services would actually be deployed using this band. It’s a lose-lose scenario and exactly the opposite of the intended goals,” he said.

“Terrestrial operators already have access to a very broad range of spectrum and should be using this first before seeking to acquire more, particularly if this process is carried out at the expense of critical applications,” he added.

About Eutelsat Communications

Established in 1977, Eutelsat Communications (Euronext Paris: ETL, ISIN code: FR0010221234) is one of the world's leading and most experienced operators of communications satellites. The company provides capacity on 35 satellites to clients that include broadcasters and broadcasting associations, pay-TV operators, video, data and Internet service providers, enterprises and government agencies.

Eutelsat's satellites provide ubiquitous coverage of Europe, the Middle East, Africa, Asia-Pacific and the Americas, enabling video, data, broadband and government communications to be established irrespective of a user's location.

Headquartered in Paris, with offices and teleports around the globe, Eutelsat represents a workforce of 1,000 men and women from 32 countries who are experts in their fields and work with clients to deliver the highest quality of service.
